Title: THE USE OF SERUM-FREE MEDIUM FOR THE PRODUCTION OF FUNCTIONALLY
ACTIVE HUMANIZED MONOCLONAL-ANTIBODY FROM NSO MOUSE MYELOMA CELLS
ENGINEERED USING GLUTAMINE-SYNTHETASE AS A SELECTABLE MARKER

Abstract: A protein-free growth medium (W38 medium) had previously been developed for the NSO mouse myeloma cell line which is cholesterol-auxotrophic. This paper describes the development of a protein-free growth medium for NSO cells expressing humanised monoclonal antibody using GS (glutamine synthetase) as a selectable marker. Several GS-engineered NSO cell lines expressing humanised monoclonal antibody grew in a modification of W38 medium which

maintained GS-selection, supplemented with cholesterol, phosphatidylcholine and beta-cyclodextrin. Further studies showed that additional glutamic acid, asparagine, ribonucleosides and choline chloride improved cell growth. Amino acid analysis identified a number of amino acids that were being depleted from the culture medium. NSO

```
cell lines 9D4 and 2H5 expressing CAMPATH-1H* were adapted to enable
    them to grow serum-free in the absence of cholesterol and
   beta-cyclodextrin. Cholesterol-independent 9D4 (9D4.CF) cells grown in
    shake flask culture using an enriched protein-free medium (WNSD
   medium), supplemented with human recombinant insulin (Nucellin),
    reached a maximum cell density to 1.86 x 10(6) cells ml(-1) producing
    76.6 mg l(-1) of antibody. CAMPATH-1H antibody produced using
    serum-free medium was found to be functionally active in vitro in the
    Antibody Dependant Cellular Cytotoxicity (ADCC) assay.
